

**Identity Theft is Possible
Because...**

1. *We are identified by means which can be falsified*
2. *People who engage in this crime stand to gain by doing so*
3. *There is no one government or credit group that is responsible for protecting your credit or ensuring accuracy*
4. *All anyone needs to do is present the right information and they can assume any identity they like*
5. *There is no biometric system in place to positively and absolutely identify the individual who seeks to obtain ID*

*The World is Ready
for Transformational
Change*

**No More
Identity Theft:
Ever!**

A Better Way

WE CAN DO THIS!

WWW.NOPOM.INFO

Your Identity CAN be secure!

The technology now exists to identify you by your biometric information; retina scan, handprint, motion signature, even scent can now be read by a computer. There is no need to embed microchips nor is this harmful or painful to you.

Just like in a science fiction movie, a sophisticated computer system can scan you and positively identify you with 100% accuracy.

NO ONE CAN EVER STEAL YOUR IDENTITY

Imagine never needing a photo ID ever again. But don't stop there — you won't need ANY cards when this system is in place. Once you have been "read" by the computer and all of your information is verified, your identity is secure.

Technology continues to grow by leaps and bounds — bringing with it the opportunity to be freed from the threat of ID Theft

RETHINKING PRIVACY ISSUES

If you think your identity is secure, think again. In today's world it is very easy to assume the identity

We can make this world a safer and more secure place, if we all work together.

of another person. All one need do in most cases is to present a birth certificate and Social Security card.

Once someone has managed to take over your identity, it can take months or even years to straighten out the mess. It has the potential to absolutely destroy your life.

Many people fear the computer and are afraid that its intrusiveness will cause them harm. Quite frankly it is just the opposite that is true. If we change the system in some fundamental ways that you may read about on our website, your privacy will be protected much better than it is today.

ALL THE ADVANTAGES— NONE OF THE PROBLEMS

As mentioned earlier, once you've been identified by the computer, your identity is secure. No one else can ever buy, sell, trade or represent them-

selves as you for any purpose whatsoever. The system will not allow it. You will never worry about leaving your ID behind or losing it. No more cards to fumble through at all... just state who you are and let the computer verify your biometric information. That's it! All you need to do in order to make purchases, credit your account with more money, or anything else which formerly required ID or a credit/debit card you will now be able to do by simply stating who you are. If you are making a purchase the computer will ask if you agree to make that purchase, and if you're getting paid you don't even have to agree. You don't have to spend it, but your account will be credited with more money any time you do anything which benefits someone else.
